AWS Cost Report

Account 409289617504 (Fluten) · Region us-west-2 (Oregon) · Prepared 2 October 2026

SEPTEMBER 2026 · ACTUAL
$210.04
Invoice 2856344917 · paid

OCTOBER 2026 · ESTIMATE
≈ $242
+$32 (+15%) vs September

POSSIBLE SAVINGS
$55–75/mo
See section 4

1. September 2026 — actual bill

SERVICE	DETAIL	AMOUNT	SHARE
EC2 – instances	t3.large 969.8 h, t3.medium 1,186.5 h, t4g.micro 481.8 h, CPU credits $1.37	$135.47	64.5%
Public IPv4 addresses	4,047.5 h in use + 459.0 h idle @ $0.005/h	$22.54	10.7%
EBS storage	gp3 170.6 GB-mo $13.65 · snapshots 169.7 GB-mo $8.48	$22.13	10.5%
Application Load Balancer	702 ALB-hours $15.80 · 76.3 LCU-hours $0.61	$16.41	7.8%
Data transfer	107.7 GB internet egress beyond 100 GB free tier $9.69 · inter-AZ $0.28 · other $0.04	$10.01	4.8%
CloudWatch	8.3 custom metrics @ $0.30	$2.50	1.2%
ECR	8.6 GB-mo image storage	$0.86	0.4%
S3	0.6 GB-mo, ~181k requests	$0.13	0.1%
Other (ACM, KMS, SNS, SQS, Secrets Manager, Glue, X-Ray)	All within free tier	$0.00	0%
Total (tax $0.00)		**$210.04**	**100%**

Line items sum to $210.05 pre-tax; the invoice total is $210.04 (AWS rounding). The "+887.5%" month-over-month trend on the bill reflects that August only covered the first days of the migration — September is the first full month on AWS, not a cost spike.

2. What was running — EC2 hours reconciled

INSTANCE	TYPE (CURRENT)	SEPTEMBER USAGE	SEP COST
integration_node	t3.medium	Full month, 720 h	$29.95
nodeA	t3.large	~233 h on t3.medium until 10 Sep, then ~485 h on t3.large	≈ $50
nodeB	t3.large	~233 h on t3.medium until 10 Sep, then ~485 h on t3.large	≈ $50
team-vpn-box	t4g.micro	From 11 Sep, ~482 h	$4.05

Per-node figures are derived from the billed hour totals and instance launch dates; AWS bills the hours by instance type, not per instance.

3. October 2026 — estimated bill

ITEM	BASIS (744 H IN OCTOBER)	SEP ACTUAL	OCT ESTIMATE
EC2 – 2× t3.large	2 × 744 h × $0.0832	$80.69	$123.80
EC2 – 1× t3.medium	744 h × $0.0416	$49.36	$30.95
EC2 – 1× t4g.micro	744 h × $0.0084	$4.05	$6.25
EC2 – CPU credits	Assumed same as September	$1.37	$1.40
Public IPv4 (7 addresses)	7 × 744 h × $0.005	$22.54	$26.04
EBS gp3 (175 GB)	175 GB × $0.08	$13.65	$14.00
EBS snapshots	28 snapshots (4 volumes × 7-day retention), steady	$8.48	$8.50
Application Load Balancer	744 h × $0.0225 + LCU	$16.41	$17.35
Data transfer	Assumes September traffic level	$10.01	$10.00
CloudWatch, ECR, S3	Assumed flat	$3.49	$3.55
Estimated total		**$210.05**	**≈ $241.84**

> **Why October is higher:** nodeA and nodeB moved from t3.medium to t3.large on 10 Sep, so September only carried about 20 days of the larger size. October is the first full month at that size and has 744 hours instead of 720. Traffic-driven items (data transfer, LCUs) could move either way.

4. Savings opportunities

#	ACTION	EST. SAVING / MONTH	NOTES
1	1-year Compute Savings Plan or Reserved Instances for the 4 always-on VMs	**$50–60**	Typical 30–40% off on-demand (general AWS range, not quoted for this account). Confirm in Cost Explorer → Savings Plans → Recommendations. Commit only once instance sizes are settled.
2	Right-size nodeA / nodeB after reviewing CPU & memory	**up to $30 per node**	Only $1.37 of CPU-credit overage suggests little bursting. t3a (~10% cheaper) or t4g/Graviton (~20%, needs arm64 images) are alternatives.
3	Release unattached Elastic IP 34.210.45.11	**$3.72**	Not attached to anything; not found in the migration logs. Confirm no one needs it first — a released IP cannot be reclaimed.
4	Improve Cloudflare cache hit rate on static assets and media	**up to ~$10**	Egress above 100 GB/month costs $0.09/GB.
5	ECR lifecycle policy; drop VPN box from DLM snapshots	**$1–2**	Housekeeping.

Left as-is by design: the ALB (required for the 2-node, 2-AZ setup); node public IPs (removing them would need a NAT Gateway at ~$33+/month); 28 snapshots (exactly the configured 7-day retention); CloudWatch metrics.

Sources: AWS bill for 1–30 Sep 2026 (issued 1 Oct 2026) and a read-only check of running EC2 instances, Elastic IPs, EBS volumes and snapshots on 2 Oct 2026. October figures are estimates at on-demand us-west-2 prices and assume the current resources run all month; actual charges will vary with traffic.
